Conductive Silver

Frost Fighter® Defroster Grid Repair Kit

Repair damaged rear window defroster grids

The 2100 Frost Fighter defroster grid repair material is designed to repair the fine conductive heating elements on rear window defrosters.

The damaged area is masked off and repaired by painting the conductor over the damaged area. The conductor bonds aggressively, dries quickly and is color matched for invisible defroster grid repairs.

Each kit comes with full instructions, grid masking tape, cap brush applicator and enough conductive repair material enough for 15-20 three inch repairs.

Frost Fighter grid repair kits use a highly conductive silver polymer repair compound. This polymer bonds aggressively to glass and provides maximum electrical conductivity to restore broken defroster elements.

Damaged areas up to four inches (10cm) can be repaired. The material dries to the touch in 10 minutes and is usable in thirty minutes. Heat to cure the material for best results.

minutes. Heat to cure the material for best results.

The conductor is color matched to the reddish brown colors used in automotive defrosters for nearly invisible repairs.

If the defroster clears only part of the rear window, it's usually a sign of a broken horizontal grid line. The first step in repairing this

type of damage is to locate the break by visual inspection. The smallest break or crack can cause the defroster to fail. Be sure to have the work area well lighted.

If the break is not obvious after close visual inspection, use a volt meter or 12 volt lamp to help locate the damage.

Grid Repair

2100 Grid Repair Kit

The damaged area is masked off using the kits tape and repaired by painting the conductor over the damaged area. The conductor bonds aggressively, dries quickly and is color matched for invisible defroster grid repairs.

Color Matched

The conductor is color matched to the reddish brown colors used in automotive defrosters for nearly invisible repairs.

Easy to use cap brush

The handy cap brush can be used to apply the repair material.

Fast and Easy

Heat cure in as little as 15 minutes for quick tab repairs.

Many Repairs

Repair up to 15-20 three inch breaks with a single grid kit for low costs per repair.

Uni-Clip Defroster Tabs
