

Frost Fighter 2000 Defroster Tab Bonding Repair Kit

Silver makes the difference bonding rear window defroster tabs

As shown in Chrysler service bulletin 08-037-19 REV.B. for Jeep Wrangler

and GM service bulletin #16-NA-171 for Escalade, Suburban, Tahoe & Yukon 2012-2016

Reattach separated tabs on rear window defrosters and defoggers. Defroster tabs are located along the sides of the defroster and frequently become separated from the defroster. A separated tab means complete defroster failure. Fortunately, this kit offers an easy, affordable defroster repair that can save the high cost of glass replacement!

Frost Fighter Defroster Tab Bonding adhesive is over 80% silver. This high silver content is needed for highly conductive tab bonding required in defroster repair. The highly conductive two part adhesive cures quickly, bonds aggressively and makes the electrical and structural connection to the defroster in one simple operation.

This system is specifically engineered for tab bonding. It is easy to use, bonds aggressively to glass and defroster coatings and makes the highly conductive bonds needed for high amperage defroster tab repairs. **Frost Fighter 200 Defroster Repair Kit Price: \$49.95**

Frost Fighter Defroster Grid Repair Kit

High Performance Rear Window Defroster Grid Repair

Improved 2120 Frost Fighter Grid Repair material features improved electrical properties, better bonding and uses the heat from the defroster to flash cure for fast defroster grid repairs. This is a breakthrough product improvement

Use when rear window defroster grid lines stop working. The fine horizontal heating elements on defrosters can be easily damaged by a single scratch or multiple breaks of the heating elements. Repairs are made by masking off and painting the Frost Fighter grid repair conductor over the damaged area. The conductor bonds aggressively, dries quickly and is color matched for invisible repairs.

New Breakthrough Defroster Grid Repair Technology. The new 2120 Grid Repair material is a breakthrough technology featuring a tougher, more conductive repair that self-cures in 20 minutes using the heat from the defroster. No more overnight curing!

Repairs and Lengths. Each kit has 5 grams of repair conductor for up to 35 total inches of repairs using the recommended two coats. This quantity of material allows multiple repairs from a single kit. Repair multiple breaks in the defroster elements up to 3-5 inches in length.

Price: \$24.95

Note: Grid repairs, not grid rebuild. This kit is designed for making repairs to rear window defrosters and not designed to rebuild badly damaged defrosters where most of the elements are damaged in multiple areas say after tint removal. For defroster replacement we offer [Clear View Defroster Kits](#)
